

ISPyB site report

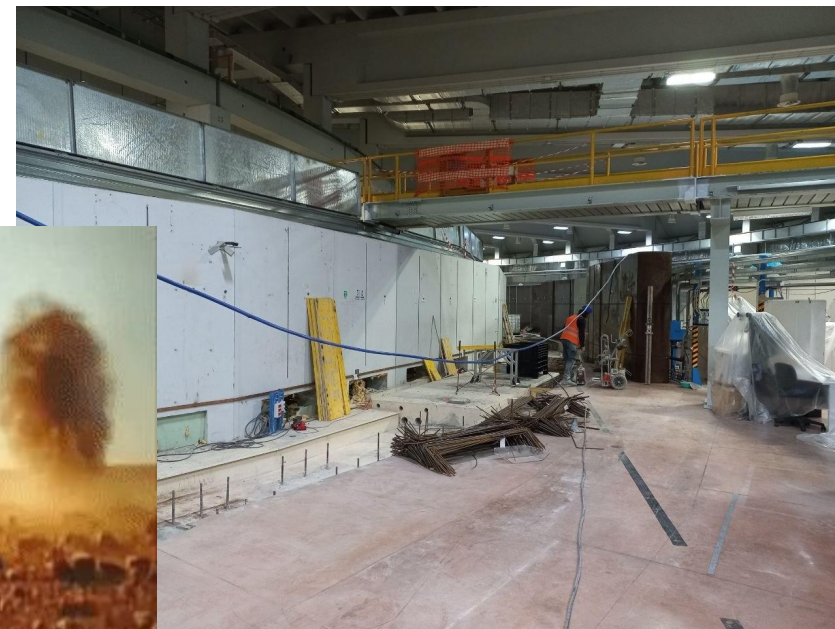

Elettra Sincrotrone Trieste

Dark period

XRD2

XRD1

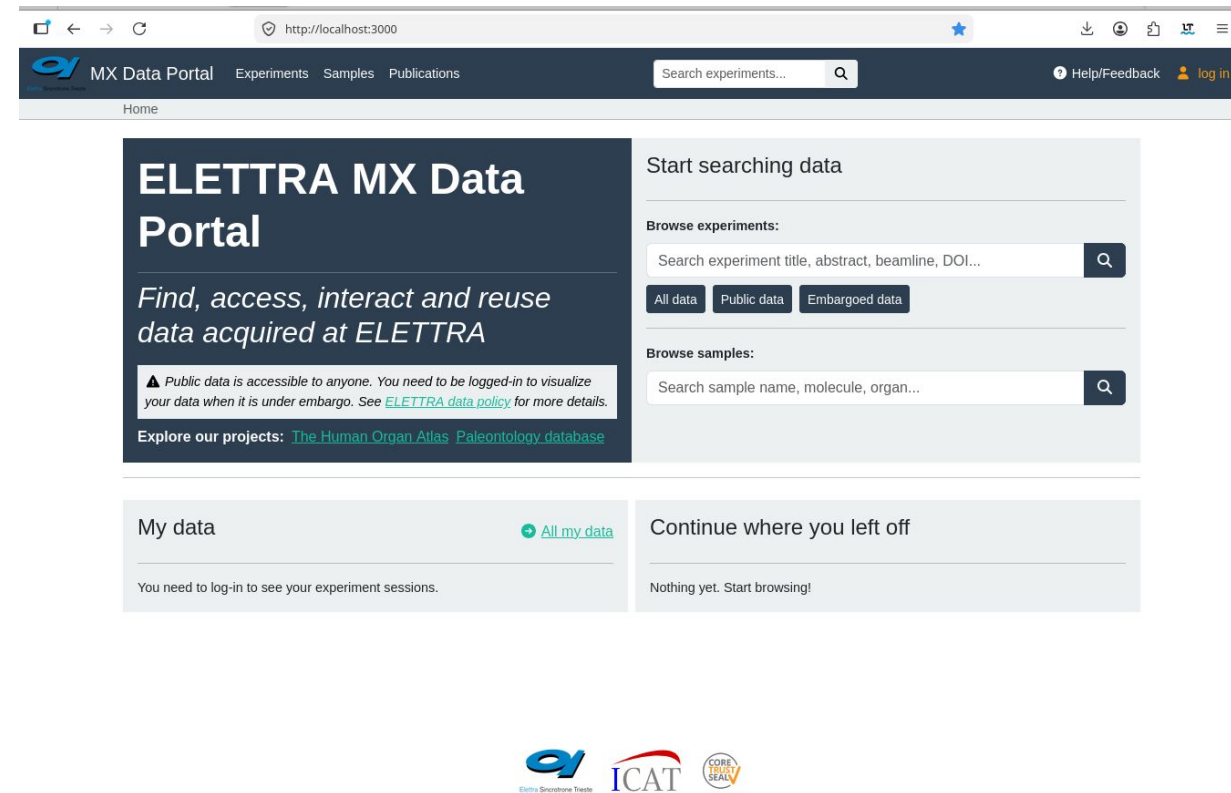

ISPyB status

Current situation:

- CentOS 7 with Apache in DMZ
- Database version **10.4.12 MariaDB**
- DB Schema:
 - Diamond Light Source
 - Version **3.0.0**
 - Repository: <https://github.com/DiamondLightSource/ispyb-database>
- Synchweb php 7 version **2023-R5.2_elettra-v1.3.0**

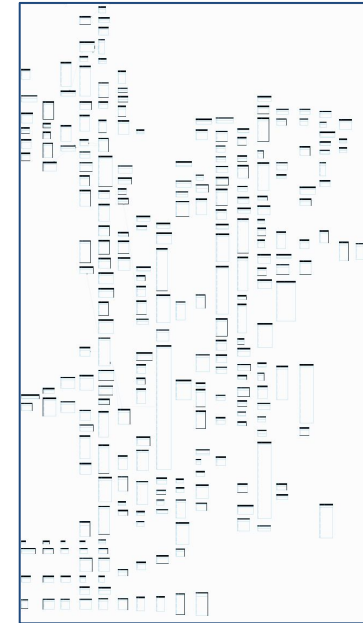

ICAT evaluation (1)

- Minimal installation:
 - payara
 - icat.server, icat.lucene, [auth.db](#)
 - icat+
 - data portal and micro-frontends
- Manual installation
- Elettra LDAP integration - auth.Idap

ICAT evaluation (2)

- Memory usage
 - Data-portal and micro-frontends: 15GB
- Differences at a glance
 - DB
 -  266 tables
 -  55 tables
 - Components
 -  ISPyB DB, Synchweb (php + javascript/[Vue.js](https://vuejs.org/))
 -  ICAT DB, ICAT.server (java), ICATplus (javascript/NodeJS), Data portal / MX app (javascript/TypeScript, React)

Plans for the next six months

- Go on with ICAT evaluation:
 - Ingestion of a few datasets from ISPyB
 - Connection to the Elettra storage system
 - Re-execution of data processing pipelines from MX app
